SUBJECT INDEX TO VOLUME 23

A

- Acquired immunodeficiency syndrome (AIDS), murine, role of B-1 cells in autoimmune response in, 293-311
- Amino acids, of mycobacterial heat shock protein, TSST-1 peptide homologous to, 381-391
- Antigen-presenting capacity, of human monocytes modulation of by HIV-1 molecule fragments, 189-199
- Antigens, hapten-protein, immune recognition of by T-cells and B-cells, 53-71
- Antisperm antibodies, mediation of cellular activity of human trophoblast cells in culture by, 231-241
- Arthritis, collagen-induced, role of B-1 cells in autoimmune response in, 293-311
- Artocarpus heterophyllus*, lectin from, composition and properties of, 167-188
- Artocarpus integer*, lectin from, effect of on functional activity of guinea pig complement, 153-160
- Autoimmune diseases
 - hemolytic anemia, cytokine serum levels in patients with, 449-456
 - implication of failure of self-epitopes to induce tolerance for, 337-346
- Autoimmune response, in
 - graft-versus-host disease, murine AIDS, and collagen-induced arthritis, role of B-1 cells in, 293-311

B

- B cells
 - interaction of with T cells, role of endogenous B cell sialidase in regulation of, 393-411
 - resting human, protein tyrosine kinase activation and protein kinase C translocation as functional components of CD40 signal transduction in, 437-448
- B-1 cells, role of in autoimmune responses in graft-versus-host disease, murine AIDS, and collagen-induced arthritis, 293-311
- B cell sialidase, endogenous, role of in regulation of B cell/T cell interactions, 393-411
- Biological response modifiers, effect of exposure to on pulmonary macrophages, 115-127
- Blocking agents, in enzyme immunoassays, poly(vinyl alcohol) as, 421-428
- Books received, 351-353

C

- Carcinoembryonic antigen (CEA), cell adhesion mediated by, colorimetric assay for, 367-380
- Cell adhesion, CEA-mediated, colorimetric assay for, 367-380

- Cell surface, interaction of human coronavirus with HLA class I molecules at, in infection, 313-321
- Cellular activity, of human trophoblast cells in culture, antispermatogenesis-mediated alterations in, 231-241
- Ceruloplasmin, effect of on lymphocytes, neutrophils, and monocytes of patients with altered immune status, 99-114
- Collagen-induced arthritis, role of B-1 cells in autoimmune response in, 293-311
- Collagen specific monoclonal antibodies, type II, production of, 85-98
- Colorimetric assay, for CEA-mediated cell adhesion, 367-380
- Complement, guinea pig, effect of *Artocarpus integer* lectin on functional activity of, 153-160
- Coronavirus, human, interaction of with HLA class I molecules at cell surface in infection, 313-321
- Cystic fibrosis, with *Pseudomonas aeruginosa*, serum IgA and IgG during treatment for, 1-13
- Cytokines
 role of in production of prostacyclin and thromboxane in human mononuclear cells, 269-279
 serum levels in patients with autoimmune hemolytic anemia, 449-456
 See also Specific cytokines
- Cytokine therapy (book review), 347
- Cytotoxicity, complement dependent, of sensory ganglion neurons, mediated by glycoprotein of HIV-1, c, 47-52

D

- Disease features, in rheumatoid arthritis, association of IgA and IgA-rheumatoid factor with, 355-365
- Dituftsin, effect of on IgG response to non-immunogenic peptides in mice, 202-212

E

- Endogenous B cell sialidase, role of in regulation of B-cell/T-cell interactions, 393-411
- Endotoxins, recovery of macrophages from states tolerant of by lipopolysaccharides and enzymatic treatments, 243-258
- Enzyme immunoassays, poly(vinyl alcohol) as blocking agent in, 421-428
- Enzymes, recovery of macrophages from endotoxin-tolerant states by treatments with, 243-258
- Epitopes, self-, failure of to induce tolerance, implication of for autoimmune disease, 337-346

F

- Fertilization, *In vitro*, in mice, effect of anti-human sperm monoclonal antibodies on, 15-24
- Fibrosarcomas, macrophage priming and activation during growth of, 457-472
- Fundamental immunology (book review), 165-166

G

- Glycoprotein, of HIV-1,
 complement-dependent cytotoxicity of sensory ganglion neurons mediated by, 47-52
- Graft-versus-host disease, role of B-1 cells in autoimmune response in, 293-311
- Guinea pig complement, effect of *Artocarpus integer* lectin on functional activity of, 153-160

H

- Hapten-protein antigens, immune recognition of by T-cells and B-cells, 53-71

- Heat shock proteins, mycobacterial, TSST-1 peptide homologous to, 381-391
- Hemolytic anemia, autoimmune, cytokine serum levels in patients with, 449-456
- HLA. *See* Human leucocyte antigen (HLA) class I molecules
- Human immunodeficiency virus-1 (HIV-1) complement-dependent cytotoxicity of sensory ganglion neurons mediated by glycoprotein of, 47-52
- modulation of antigen presenting capacity of human monocytes by molecule fragments from, 189-199
- Human leucocyte antigen (HLA) class I molecules, interaction of human coronavirus at cell surface in infection, 313-321
- Hyporesponsiveness, systemic immunologic, to ovalbumin in neonatal rats, induction of by peptic fragments of ovalbumin, 73-83

I

- IgA. *See* Immunoglobulin A (IgA)
- IgE. *See* Immunoglobulin E (IgE)
- IgG. *See* Immunoglobulin G (IgG)
- Il-1. *See* Interleukin-1 (Il-1) receptor antagonists
- Il-2. *See* Interleukin-2 (Il-2)
- Immune recognition, of hapten-protein antigens by T-cells and B-cells, 53-71
- Immunoassays, enzyme, poly(vinyl alcohol) as blocking agent in, 421-428
- Immunocompromised patients, effect of ceruloplasmin on lymphocytes, neutrophils, and monocytes on, 99-114
- Immunogens, electroeluted outer membrane proteins as, 223-230
- Immunoglobulin-A (IgA)
 - association of with disease features in rheumatoid arthritis, 355-365
 - circulating levels of during treatment for

- cystic fibrosis with *Pseudomonas aeruginosa*, 1-13
- Immunoglobulin-E (IgE), expression of sheep recombinant gene for, 25-37
- Immunoglobulin-E (IgE) responses, hapten-specific, role of interferon- α in maintenance of, in mice, 213-221
- Immunoglobulin-G (IgG)
 - circulating levels of during treatment for cystic fibrosis with *Pseudomonas aeruginosa*, 1-13
 - effect of dituftsin and polytuftsin on response of to non-immunogenic peptides in mice, 202-212
 - role of Il-1 in production of in murine lupus model, 281-292
- Infection, interaction of HLA class I molecules with human coronavirus at cell surface in, 313-321
- Interferon- α , role of in maintenance of hapten-specific IgE responses in mice, 213-221
- Interleukin-1 (Il-1), receptor antagonists of, rabbit, development of neutralizing monoclonal antibodies against, 129-142
- Interleukin-2 (Il-1), role of in production of IgG in murine lupus model, 281-292
- Interleukin-2 (Il-2), effect of dietary protein deficiency on production of in syngeneic mixed lymphocyte reactions of mice, 143-152
- Interleukin-3 (Il-3), effect of dietary protein deficiency on production of in syngeneic mixed lymphocyte reactions of mice, 143-152
- In vitro* fertilization, in mice, effect of anti-human sperm monoclonal antibodies on, 15-24

J

- Jacalin, composition and properties of, 167-188

L

Laboratory diagnosis of viral infections
(book review), 473

Lectins

Artocarpus heterophyllus, composition
and properties of, 167-188

Artocarpus integer, effect of on func-
tional activity of guinea pig comple-
ment, 153-160

effect of on mouse peritoneal macro-
phage phagocytic activity, 429-436

effect of on peritoneal macrophage
phagocytic activity, in mice,
429-436

Lipopolysaccharides, recovery of
macrophages from endotoxin-tolerant
states by, 243-258

Lupus model, murine, role of Il-1 in pro-
duction of IgG in, 281-292

Lymphocytes

of patients with altered immune status,
effect of ceruloplasmin on, 99-114

syngeneic mixed reactions of, of mice,
effect of dietary protein deficiency
on production of Il-2 and Il-3 in,
143-152

M

Macrophages

peritoneal, effect of lectin on phagocytic
activity of, in mice, 429-436

priming and activation of during fibro-
sarcoma growth, 457-472

pulmonary, effect of exposure to biolog-
ical response modifiers on, 115-127

recovery of from endotoxin-tolerant
states by lipopolysaccharide and en-
zymatic treatments, 243-258

Methods of immunological analysis (book
review), 161-163

Mice

effect of anti-human sperm monoclonal
antibodies on *in vitro* fertilization in,
15-24

effect of dietary protein deficiency on
production of Il-2 and Il-3 in syngen-
eic mixed lymphocyte reactions in,
143-152

effect of dituftsin and polytuftsin on IgG
response to non-immunogenic pep-
tides in, 202-212

role of B-1 cells in autoimmune re-
sponse in graft-versus-host disease,
collagen-induced arthritis, and AIDS
in, 293-311

role of Il-1 in production of IgG in lu-
pus in, 281-292

role of interferon- α in maintenance of
hapten-specific IgE responses in,
213-221

Molecule fragments, HIV-1, modulation
of antigen-presenting capacity of
human monocytes by, 189-199

Monoclonal antibodies

anti-human sperm, effect of on *in vitro*
fertilization, in mice, 15-24

anti-streptococcal, reactivity of with hu-
man sperm nuclei, 323-335

against G3m(u) and G3m(g), character-
ization of using Western blot, 39-45

neutralizing, against rabbit Il-1 receptor
antagonist, development of, 129-
142

type II collagen specific, production of,
85-98

Monocytes, of patients with altered im-
mune status, effect of ceruloplasmin
on, 99-114

Mononuclear cells, human, role of cyto-
kines in production of prostacyclin
and thromboxane in, 269-279

Mycobacteria, heat shock protein of,
TSST-1 peptide homologous to,
381-391

N

Natural killer cells, activity of in schizo-
phrenia, 259-268

Neutrophils, of patients with altered im-

mune status, effect of ceruloplasmin on, 99-114

O

Outer membrane proteins, electroeluted, as immunogens, 223-230

Ovalbumin, induction of systemic immunologic hyporesponsiveness to in neonatal rats by peptic fragments of, 73-83

P

Peptic fragments, of ovalbumin, induction of systemic immunologic hyporesponsiveness to ovalbumin by, 73-83

Peptides

non-immunogenic, in mice, effect of dituftsins and polytuftsins, on IgG response to, 202-212

TSST-1

activation of T cells by, 413-420
homologous to amino acids of mycobacterial heat shock protein, 381-391

Phagocytic activity, of peritoneal macrophages, effect of lectin on, in mice, 429-436

Polytuftsins, effect of on IgG response to non-immunogenic peptides in mice, 202-212

Poly(vinyl alcohol), as blocking agent in enzyme immunoassays, 421-428

Prostacyclin, in human mononuclear cells, role of cytokines in production of, 269-279

Protein deficiency, dietary, effect of on production of IL-2 and IL-3 in syngeneic mixed lymphocyte reactions in mice, 143-152

Protein kinase C translocation, as functional component of CD40 signal

transduction in resting human B cells, 437-448

Proteins

electroeluted outer membrane, as immunogens, 223-230

mycobacterial heat shock, TSST-1 peptide homologous to, 381-391

Protein tyrosine kinase activation, as functional component of CD40 signal transduction in resting human B cells, 437-448

Pseudomonas aeruginosa, with cystic fibrosis, serum IgA and IgG during treatment for, 1-13

Pulmonary macrophages, effect of exposure to biological response modifiers on, 115-127

R

Rats, neonatal, induction of systemic immunologic hyporesponsiveness to ovalbumin in by peptic fragments of ovalbumin, 73-83

Recombinant gene, sheep, for IgE, expression of, 25-37

Rheumatoid arthritis, association of IgA and IgA-rheumatoid factor with disease features in, 355-365

Rheumatoid factor, IgA-, association of with disease features in rheumatoid arthritis, 355-365

S

Schizophrenia, natural killer cell activity in, 259-268

Sensory ganglion neurons, complement-dependent cytotoxicity of mediated by glycoprotein of HIV-1, 47-52

Sheep, recombinant IgE gene of, expression of, 25-37

Sialidase, endogenous B cell, role of in

[Sialidase, *continued*]

regulation of B-cell/T-cell interactions, 393-411

Signal transduction, CD40, in resting human B cells, protein tyrosine kinase activation and protein kinase C translocation as function of, 437-448

Sperm nuclei, human, reactivity of anti-streptococcal monoclonal antibodies with, 323-335

Streptococci, monoclonal antibodies against, reactivity of with human sperm nuclei, 323-335

Syngeneic mixed lymphocyte reactions, of mice, effect of dietary protein deficiency on production of Il-2 and Il-3 in, 143-152

T

T cells

activation of by TSST-1 peptides, 413-420

interaction of with B cells, role of endogenous B cell sialidase in regulation of, 393-411

Thromboxane, in human mononuclear cells, role of cytokines in production of, 269-279

Toxic shock syndrome toxin-1 (TSST-1) peptide
activation of T cells by, 413-420
homologous to amino acids of mycobacterial heat shock protein, 381-391

Transmissible spongiform encephalopathies (book review), 349-350

Trophoblast cells, human, in culture, antisperm antibody-mediated alterations in cellular activity of, 231-241

TSST-1. *See* Toxic shock syndrome toxin-1 (TSST-1) peptide

W

Western blot, characterization of monoclonal antibodies against G3m(u) and G3m(g) using, 39-45

IMMUNOLOGICAL INVESTIGATIONS

INSTRUCTIONS FOR PREPARATION OF MANUSCRIPTS FOR DIRECT REPRODUCTION

Immunological Investigations is a bimonthly journal of Molecular, Cellular, and Clinical Immunology.

DIRECTIONS FOR SUBMISSION

One manuscript suitable for direct reproduction and two copies of the manuscript must be submitted to the Editorial Office.

REPRINTS

Owing to the short production time for articles in this journal it is essential to indicate the number of reprints required upon notification of acceptance of the manuscript. Reprints are available in quantities of 100 and multiples thereof, in addition to the twenty (20) free copies provided to the senior author with orders of 100 or more reprints; a reprint price list will be sent to the senior author with the notification of acceptance of the manuscript.

Manuscript should be mailed to:

Editorial Office, The Ernest Witebsky Center for Immunology
207 Sherman Hall, School of Medicine
State University of New York at Buffalo
Buffalo, New York 14214
Telephone: (716) 829-2900; Fax: (716) 829-2158

INSTRUCTIONS FOR THE PREPARATION OF MANUSCRIPTS

Since all contributions are reproduced by direct photography of the manuscripts, the following instructions must be strictly adhered to. Non-compliance will result in the return of the manuscript to the author(s) and delay in its publication.

TYPING INSTRUCTIONS

1. Manuscripts must be typewritten, $1\frac{1}{2}$ spaced, on good quality white bond paper measuring at least $8\frac{1}{2}$ x 11 inches.
2. Use a black typewriter ribbon. Errors may be corrected by using white opaque correcting fluids or tapes.
3. The typing area of page 1, including the title, should be $6\frac{1}{4}$ x $8\frac{1}{2}$ and that of all other pages $6\frac{1}{4}$ x $9\frac{1}{2}$.
4. Tables should be typed as part of the text but in such a way as to separate them from the text by a three line space at both top and bottom. The title TABLE (capitalized and followed by a Roman number) should precede the table and be centered.
5. Draw graphs and other numbered figures in black ink on a separate piece of white paper. Photographs should be glossy black and white prints. Type legends or figures single spaced on a separate sheet, along the full width of the page.

The indication FIGURE should be capitalized and, with the figure's number (in Arabic numerals), centered above the legend. Indicate the top of the picture on the back. Indicate with blue pencil in the text where the picture(s) should be inserted.

6. Number the references (including footnotes) in the text consecutively by numbers in parentheses. Collect the references (and footnotes) at the end, as follows:

(*journal*): S. G. Trasher, N. Dorosczak and S. Cohen, J. Immun., 107, 1394-1401 (1971).

(*book*): D. Pressman and A. L. Grossberg, The Structural Basis of Antibody Specificity. Benjamin, New York, (1968) pp. 25-32.

(*article in book*): F. Milgrom, in International Convocation on Immunology, Vol. 1., N. Rose and F. Milgrom, eds. Karger, New York, (1969) pp. 270-277.

FORMAT OF MANUSCRIPTS

1. The title should be capitalized and centered, at least two inches from the top of the page. This is followed by a one-line space and by the name(s) and address(es) of the author(s) as follows:

AUTOMIMMUNE RESPONSES TO THYROGLOBULIN IN RATS

T. Atkins and Z. Ginsberg

Departments of Microbiology and Pathology

School of Medicine, State University of New York at Buffalo

Buffalo, New York 14214

2. Then, after a three line space, follows the abstract, comprising less than 10 % of the length of the text of the article. It must be typed single spaced and headed ABSTRACT.

3. After a three line space follows the article itself, whenever possible subdivided into sections such as: MATERIALS AND METHODS, RESULTS, DISCUSSION, ACKNOWLEDGMENTS and REFERENCES. The headings should be centered and separated by one extra line space from the typed material that precedes and follows it.

4. Each page of manuscript should be numbered lightly at the bottom of the sheet, with a blue pencil.

Announcing the latest edition in a vital ongoing series...

Now in its *fifth* year
of groundbreaking clinical
developments!

AIDS Clinical Review 1993/1994

edited by

PAUL VOLBERDING and
MARK A. JACOBSON

*University of California—San Francisco and
San Francisco General Hospital,
California*

September, 1993

304 pages, illustrated

More **timely, appropriate, and useful** than conventional references—more **in-depth and comprehensive** than journal articles—this **up-to-date** resource presents the most important recent progress in HIV infection and disease research.

Gives interdisciplinary perspectives not available in other sources!

Analyzing controversial medical issues, ***AIDS Clinical Review 1993/1994***

- focuses on specific areas in which significant new data have emerged in the epidemiology, diagnosis, therapy, and prevention of HIV infection and HIV-associated complications
- discusses vaccine development in both the prevention and treatment of HIV disease
- explores the medical evaluation and management of persons infected with the HTLV-I and HTLV-II retroviruses
- comprehensively reviews the tuberculosis epidemic within the HIV pandemic
- provides a thorough overview of current therapeutic options for treating *Pneumocystis carinii* pneumonia
- investigates the risk of HIV infection among health care workers
- and much more!

Detailing the clinical benefits and adverse reactions of the most common class of reverse transcriptase inhibitors currently available or under investigation, ***AIDS Clinical Review 1993/1994*** assesses **state-of-the-art** drug therapies for HIV disease—highlighting developments with...

- zidovudine (Retrovir)
- didanosine (Videx)
- zalcitabine (HIVID)
- stavudine (d4T)

Bringing together the knowledge and expertise of **over 20** leading clinical investigators at the forefront of AIDS research—to discuss recent advances, share the results of their own investigations, and present *previously unpublished data*—***AIDS Clinical Review 1993/1994*** is essential reading for all medical professionals involved in both AIDS research and clinical practice.

Contents

The Clinical Significance of the Biological Phenotype of HIV

*Joep M. A. Lange and
Menno D. de Jong*

Counseling and Medical Evaluation of HTLV-I- and HTLV-II-Infected Patients

*Tebeb Gebretsadik and
Edward L. Murphy*

Discover the potential benefits of cytokine therapy for a variety of conditions with...

GRANULOCYTE RESPONSES TO CYTOKINES

Basic and Clinical Research

(Immunology Series/57)

edited by

RONALD G. COFFEY

University of South Florida, Tampa

July, 1992

736 pages, illustrated

This timely volume explores the basic physiological functions of granulocytes, their modification by cytokines, and the clinical experience with cytokines—discussing the specific responses of neutrophils, eosinophils, basophils, and mast cells to individual cytokines.

Written by more than 60 experts from all over the world, *Granulocyte Responses to Cytokines*...

- examines the responses of granulocytes and mast cells to hormones, chemotactic peptides, and phorbol esters
- details cytokine effects on morphology, migration, adhesion, phagocytosis, degranulation, and cytotoxicity against tumor cells and pathogens
- covers cyclic nucleotide, protein kinases, G proteins, lipoxygenase, and leukotrienes in the regulation of granulocyte functions
- indicates caution in the use of cytokine therapy for certain leukemias due to cytokine effects on the growth of malignant cells
- presents clinical studies with granulocyte-macrophage and granulocyte colony-stimulating factors with promising results in treating genetic-, virus-, and drug-induced granulocytopenias and immunodeficiencies
- and more!

Containing nearly 3900 helpful literature citations, *Granulocyte Responses to Cytokines* is a comprehensive guide for immunologists; hematologists; oncologists; pharmacologists; biologists; microbiologists; and biochemists; pathologists; internists; and graduate-level students in these disciplines.

contents

Functions of Granulocytes

Neutrophil Activation and Function in Health and Disease, *Kent J. Johnson, James Varani, and James E. Smolen*

The Neutrophil Respiratory Burst Mechanism, *Linda C. McPhail, Susan L. Strum, Peter A. Leone, and Silvano Sozzani*

Regulation of Lipoxygenase Enzymes in Leukocytes, *Jack Y. Vanderhoek*

Activation of Leukotriene Production in Granulocytes: Effects on Cell Activation, *Anthony W. Ford-Hutchinson*

G-Proteins and the Role of Second Messengers in the Regulation of the Human Neutrophil, *Pramod M. Lad, John S. Kaptein, Ching-Kow E. Lin, Cosmas I. Kalanta, Stephen J. Scott, and David Guoqing Gu*

Eosinophil Activation and Function in Health and Disease, *Randa I. Abu-Chazaleh, Hirohito Kita, and Gerald J. Gleich*

Basophils and Mast Cells: Piecemeal Degranulation in Situ and ex Vivo: A Possible Mechanism for Cytokine-Induced Function in Disease, *Ann M. Doorak*

Signal Mechanisms in the Activation of Basophils and Mast Cells, *Donald MacGlashan, Jr.*

Effects of Cyclic Nucleotides on Granulocytes, *Ronald G. Coffey*

Effects of Cytokines: Basic Research

Regulatory Effects of Cytokines on Myelopoiesis, *F. Herrmann and R. Mertelsmann*

Cytokine-Stimulated Emigration of Granulocytes in Vivo, *Dennis E. Van Epps*

Physiological Studies with Human Leukocyte Inhibitory Factor, *Larry Borish and Ross Rocklin*

The Biology of NAP-1/IL-8, a Neutrophil-Activating Cytokine, *Jens-M. Schröder and Enno Christophers*

Activation of Neutrophils by Interleukins-1 and -2 and Tumor Necrosis Factors, *Antonio Ferrante*

Modulation of Neutrophil Functions by γ -Interferon, *Giorgio Berton and Marco A. Cassatella*

Activation of Neutrophils by Granulocyte-Macrophage Colony-Stimulating Factor, *John F. DiPersio and Camille N. Abboud*

Biochemical Effects of Human Granulocyte-Macrophage Colony-Stimulating Factor (GM-CSF) on the Human Neutrophil, *Richard Sullivan*

Mechanisms of Host Tissue Damage by Cytokine-Activated Neutrophils, *Antonio Ferrante, Inge C. Kowanko, and Edna J. Bates*

Tumor Necrosis Factor Stimulation of Neutrophils for Antitumor Activity, *Hungyi Shau and Robert L. Roberts*

Interferon Activation of Eosinophils, *C. De Simone, S. Tzantzoglou, G. Santini, F. Sorice, E. Jirillo, and C. Rumi*

Regulation of Human Eosinophil Production and Function by Interleukin-5, *Angel F. Lopez, M. Frances Shannon, Mon-Ming Chia, Linda Park, and Mathew A. Vadas*

Cytokine Stimulation of Human Basophil Histamine Release, *Mary Haak-Frendscho and Allen P. Kaplan*

Hemopoietic Growth Factors Regulate Basophil Function and Viability, *Koichi Hirai, Yutaka Morita, and Terumasa Miyamoto*

Effects of Hematopoietic Growth Factors on Nonhematopoietic Cells, *Shoukat Dedhar and Connie Eaves*

Effects of Cytokines on the Expression of Adhesion Molecules in Allergic Diseases, *Eduardo Calderón*

Effects of Cytokines: Clinical Research

Granulocyte Colony-Stimulating Factors as Therapeutic Agents, *Robert E. Donahue and Steven C. Clark*

G-CSF and M-CSF: Preclinical and Clinical Results, *F. Herrmann, A. Lindemann, and R. Mertelsmann*

Clinical Trials of Granulocyte-Macrophage Colony-Stimulating Factor for the Treatment of Aplastic Anemia, *Saraj Vadhan-Raj*

Clinical Trials of Granulocyte Colony-Stimulating Factors for Treatment of Bone Marrow Depression Associated with Cancer Chemotherapy, *Graham J. Lieschke and George Morstyn*

AIDS Research Reviews

VOLUME 2

edited by

WAYNE C. KOFF, *National Institutes of Health, Rockville, Maryland*

FLOSSIE WONG-STAAI,
University of California, San Diego, La Jolla

RONALD C. KENNEDY, *Southwest Foundation for Biomedical Research, San Antonio, Texas*

May, 1992

416 pages, illustrated

This **timely** volume offers a forum for addressing priority research questions aimed at expediting prevention and control of AIDS—highlighting the **latest advances** in HIV molecular biology, host responses, animal models, and drug and vaccine development.

Written by more than 35 experts in the field, ***AIDS Research Reviews: Volume 2***...

- describes **recent** modeling studies that give a structural perspective of the CD4 antigen and reviews receptor-mediated activation in HIV/SIV viral entry
- examines studies of HIV-1 viral burden in human mononuclear cell populations and the association between viral burden and immunosuppression/disease
- presents **current** SIV research, including studies on vaccines, antiviral therapies, host immune responses, epitope mapping, pathogenesis, and new SIV isolates
- discusses the potential for catalytic RNAs to serve as therapeutic agents against HIV
- explores prospects for inducing mucosal immunity to HIV as well as the potential of HIV-1 gp120 as a candidate subunit vaccine
- and much more!

Containing nearly 1350 helpful literature citations, ***AIDS Research Reviews: Volume 2*** is a valuable reference for microbiologists and virologists; molecular and cell biologists; immunologists; hematologists; oncologists; infectious disease specialists; pharmacologists; medicinal chemists, biochemists, and biotechnologists; parasitologists; and pathologists.

CONTENTS

Molecular Biology

The Accessory Gene Functions of the Primate Immunodeficiency Viruses,
Ernest F. Terwilliger

Cellular Factors in HIV Transactivation,
Flossie Wong-Staal

Structure, Splicing, and Regulation of Expression of HIV-1: A Model for the General Organization of Lentiviruses and Other Complex Retroviruses,
George N. Pavlakis, Stefan Schwartz, Donna M. D'Agostino, and Barbara K. Felber

Structural Perspective of the CD4 Antigen,
Thomas Kieber-Emmons and David B. Weiner

Host Responses

Studies of HIV-1 Viral Burden in Human Mononuclear Cell Populations,
Steven M. Schnittman and Anthony S. Fauci

Viral Fusion and Viral Fusion Proteins,
Timothy Taylor and Patrick Kanda

Receptor-Mediated Activation in HIV/SIV Viral Entry,
Jonathan S. Allan

Neurotoxins and the Dementia of AIDS,
Dana Giulian and Christine A. Noonan

Animal Models

SIV Update,
Murray B. Gardner

The SIV-Specific CD8+ Lymphocyte Response in Rhesus Monkeys,
Norman L. Letvin, Hiroshi Tsubota, Hiroshi Yamamoto, Michael D. Miller, and Ling Shen

Infection of the Laboratory Rabbit with HIV-1 and HTLV-I,
Sansana Sawasdikosol and Thomas J. Kindt

Drug Development

HIV Drug Resistance,
Douglas D. Richman

Variable HIV Sensitivity to Neutralization by Recombinant Soluble CD4,
Eric S. Daar and David D. Ho

Catalytic RNAs (Ribozymes): A New Frontier in Biomedical Applications,
Nava Sarver, John A. Zaia, and John J. Rossi

Vaccine Development

The Mucosal Immune System in HIV Infection and Prospects for Mucosal Immunity to AIDS,
Jerry R. McGhee and Jiri Mestecky

HIV-1 gp120 as a Subunit Vaccine,
Kathelyn S. Steimer and Nancy L. Haigwood

Studies of HIV-1-Specific CTLs: Recognition of Multiple Highly Conserved Epitopes in the Gag and RT Proteins,
Bruce D. Walker

HIV Vaccine Studies in the Chimpanzee,
Alan M. Schultz

ISBN: 0-8247-8665-3

Gain a solid understanding of the growing field of cytokine research with...

CYTOKINES IN HEALTH AND DISEASE

This timely reference presents detailed descriptions of each of the major cytokines, focusing on the explosion of information made available by recent advances in molecular biology.

Providing solid introductions to all aspects of the most important cytokines and in-depth discussions of up-to-date research, ***Cytokines in Health and Disease***

- describes the biochemistry and molecular biology of cytokines
- examines the interactions of cytokines with inflammatory cells
- supplies new directions for cytokine research
- reviews the role of cytokines in multiple organs and systems plus their potential clinical utility
- delineates current knowledge of cytokine receptors
- reports on the function of cytokines in malaria, septic shock, AIDS, and chemotherapy
- and more!

With over 3500 references, ***Cytokines in Health and Disease*** is an excellent resource for all immunologists, physiologists, pathologists, oncologists, hematologists, intensive care physicians, surgeons, and transplantation physicians, as well as a perfect volume for those new to the field.

Chronic Lymphocytic Leukemia

Scientific Advances and Clinical Developments

(Basic and Clinical Oncology Series/1)*

edited by

BRUCE D. CHESON

National Cancer Institute, Bethesda, Maryland

September, 1992

448 pages, illustrated

About the Series...

"...Many of the recent advances in oncology have resulted from close interaction between the basic scientist and the clinical researcher. The aim of this new series will therefore be to focus on the success of this relationship as demonstrated by new therapies and promising areas for scientific research."

—Bruce D. Cheson, Series Editor

This timely volume presents the **current** knowledge of the biology and immunology of chronic lymphocytic leukemia (CLL) and how it relates to the pathogenesis, diagnosis, and therapy of this common form of leukemia—focusing on laboratory and clinical research **and** the state-of-the-art approach to the patient with CLL.

Contains the first discussion of new chemotherapy agents in book form!

Written by over 20 leading investigators in the field, *Chronic Lymphocytic Leukemia...*

- describes the pathogenesis of immunodeficiency and disordered immunity in CLL
- evaluates the immunologic and therapeutic implications of cross-reactive idiotypes in CLL
- provides evidence for clonal evolution and its clinical relevance

- analyzes prognostic factors used to separate patients into varying risk groups
- explores traditional chemotherapy as well as **major advances** using the new purine analogues, biological agents, and bone marrow transplantation
- addresses the mechanisms of acquired drug resistance in CLL cells and how to overcome them **and** the new spectrum of infections resulting from more immunosuppressive chemotherapeutic agents
- and more!

Extensively referenced with nearly 1650 bibliographic citations, *Chronic Lymphocytic Leukemia* is a valuable resource for oncologists, hematologists, immunologists, pathologists, infectious disease specialists, internists, and molecular biologists.

C O N T E N T S

Immunologic Markers in B-Cell Chronic Lymphocytic Leukemia, *Arnold S. Freedman and Lee M. Nadler*

The Control of Growth and Differentiation in Chronic Lymphocytic Leukemia (B-CLL) Cells, *Kenneth Nilsson*

Tumor Necrosis Factor and Autocrine Growth Loops: Implications for Therapy, *A. V. Hoffbrand, H. E. Heslop, and M. K. Brenner*

Chromosome Abnormalities in B-Cell Chronic Lymphocytic Leukemia, *Gunnar Juliusson and Gösta Gahrton*

Oncogenes in Chronic Lymphocytic Leukemia, *Yoshihide Tsujimoto*

Immunologic and Therapeutic Implications of Anti-Idiotypic Antibodies, *Thomas J. Kipps*

Pathogenesis of the Immunodeficiency in B-Cell Chronic Lymphocytic Leukemia, *Robert Foa*

Hypogammaglobulinemia and Disordered Immunity in CLL, *Guillaume Dighiero*

Clonal Evolution in Chronic Lymphocytic Leukemia, *LoAnn Peterson, Mark Blackstadt, and Neil Kay*

Cellular Metabolism of Nucleoside Analogs in CLL: Implications for Drug Development, *William Plunkett and Varsha Gandhi*

Drug Resistance in Chronic Lymphocytic Leukemia, *Robert Silber and Milan Potmesil*

An Outline of Clinical Management of Chronic Lymphocytic Leukemia, *Kanti R. Rai*

Chronic Lymphocytic Leukemia: Staging and Prognostic Factors, *Bruce D. Cheson*

Chronic Lymphocytic Leukemia in Early Stage: "Smoldering" and "Active" Forms, *Emilio Montserrat, Nurla Viñolas, Juan-Carlos Reverter, and Ciril Rozman*

Chemotherapy of Chronic Lymphocytic Leukemia, *Michael J. Keating*

Innovative Treatment Strategies for Chronic Lymphocytic Leukemia: Monoclonal Antibodies, Immunoconjugates, and Bone Marrow Transplantation, *Susan N. Rabinowe, Michael L. Grossbard, and Lee M. Nadler*

Diagnosis and Treatment of CLL Variants, *Daniel Catovsky*

Infection in Chronic Lymphocytic Leukemia: A Reappraisal, *D. P. Kontoyianis, E. J. Anaissie, and G. P. Bodey*

ISBN: 0-8247-8736-6

This book is printed on acid-free paper.

**Basic and Clinical Oncology* is a series of individual volumes under the general editorial direction of Bruce D. Cheson, Head, Medicine Section, Cancer Therapy Evaluation Program, National Cancer Institute, Bethesda, Maryland.

Expand your knowledge of biologic therapies with...

Biological Response Modifiers in the Treatment of Hematopoietic Neoplasia

(Hematology Series/15)

edited by

MOSHE TALPAZ, RAZELLE KURZROCK, and
JORDAN U. GUTTERMAN, *The University of Texas M.D.
Anderson Cancer Center, Houston*

April, 1992

296 pages, illustrated

This timely volume examines the **current** usage of biologic agents in hematologic malignancies—providing the scientific rationale for each of the therapeutic approaches discussed.

Written by more than 25 leading investigators in the field, ***Biological Response Modifiers in the Treatment of Hematopoietic Neoplasia***...

- describes the use of trace physiological polypeptides normally available in the body, such as interferons, IL-2, growth factors, and cytokines, as therapeutic agents
- explores the importance of semisolid cell culture media for growing hematopoietic cells and identifying new factors
- considers the use of biologic agents in combination therapy with traditional drugs for treating leukemias and lymphomas
- reviews the clinical results of each specific therapy
- and more!

Containing nearly 975 bibliographic citations, ***Biological Response Modifiers in the Treatment of Hematopoietic Neoplasia*** is a state-of-the-art reference for hematologists, oncologists, immunologists, internists, and postgraduate students in medical oncology and hematology.
